

Environmental impact report

Carbon footprint analysis from 1/1/2025 to
12/31/2025

* The consolidated type display is not
according to the GHG Protocol standard for
holding type organizations and/or with
investee organizations.

Electricity generation

Electricity T&D

Use of sold products

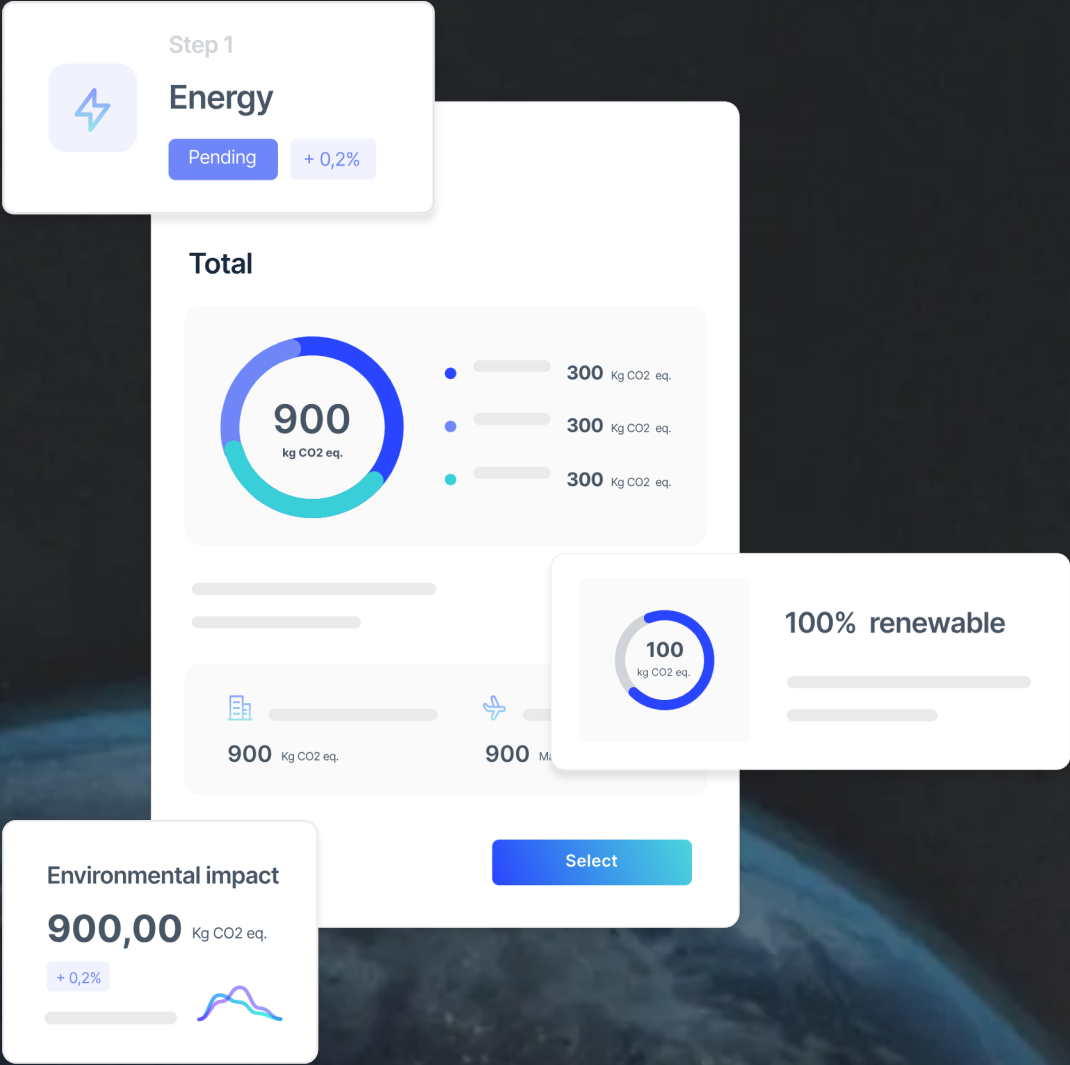

Methodology

This document presents the analysis of the carbon footprint of the scopes selected (partially) during the dates 1/1/2025 to 12/31/2025. The analysis has been created after the support document have been presented by the company under the GHG Protocol methodology.

Measure

This section present the results of the carbon footprint analysis in the scopes selected from the company and it's corresponding categories.

Total impact

Total carbon footprint results of the company

Total

- Scope 1 0.00 t CO₂ eq.
- Scope 2 8.29 t CO₂ eq.
- Scope 3 1,030.01 t CO₂ eq.

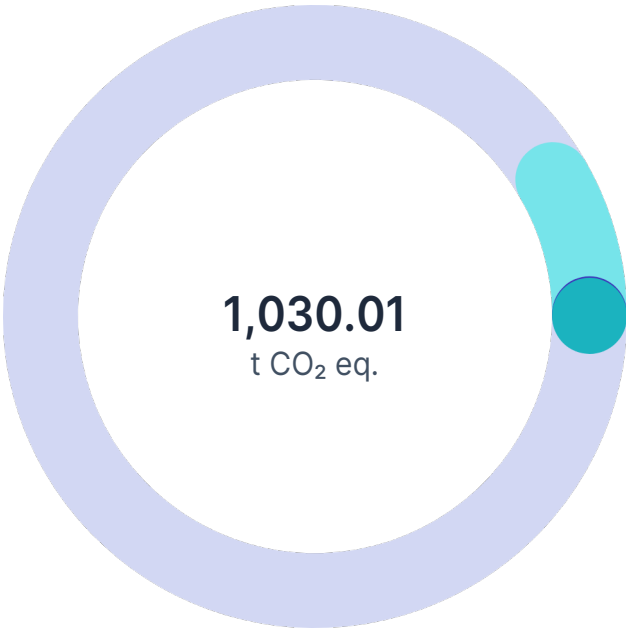

Legend

- Scope 1
- Scope 2
- Scope 3

		t CO ₂ eq.
Combustion		0.00

Activities related to fuel and energy

The goal is to account for the indirect emissions associated with the production of purchased fuels and electricity consumed by the company.

- Electricity generation - 53.78%
- Electricity transmission and distribution - 46.22%

Type	Description	t CO ₂ eq.
Fuel production	Upstream fuel emissions: Emissions related to the extraction, production, and transportation of fuels consumed by the company.	0
Electricity production	Emissions related to the extraction, production, and transportation of fuels consumed in the generation of electricity, steam, heating, and cooling used by the company.	0.91
Losses in electricity transmission and distribution	Emissions related to the generation (previous activities and combustion) of electricity, steam, heating, and cooling consumed (i.e., lost) in a transmission and distribution (T&D) system.	0.78
Total		1.69

Organizations by scopes

Emissions coming from all organizations that are part of your company in t CO₂ eq. by scope

Company	Scope 1	Scope 2	Scope 3	Total
